/organism="Drosophila melanogaster" /mol_type="genomic DNA" /db xref="taxon:7227" /clone="BaCR19D16" /clone_lib="RPCI-98" /note="end : TET3"	melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm. Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila BAC clones the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazucoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2, cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sequence represents a fragment of the Saccarapolyspora erythraea genome, designated eryA. The polypeptides encoded by this region are involved in the biosynthesis of the polyketide segment of erythromycin eryA is organised in modules and each module takes care of one condensation step. The precise succession of elongation steps is dictated.
                                                                                                                                                                                           Biosynthesis of specific polyketide analogues esp. erythromycin cpds. - by introducing altered biosynthetic gene-contg. This fragment may be specifically altered such that novel polyketide molecules of desired structure are produced. Three types of alteration may be produced; those inactivating single function in a module which does not arrest acyl chain growth; those inactivating a single function in a module which does affect chain growth; and those affecting an entire module. Which does affect chain growth; and those affecting an entire module. The mutations may be introduced by gene replacement. (Updated on 25-MAR-2003 to correct PN field.) In particular, the gene is a polyketide synthase coding sequence. The composition and methods are useful for producing synthetic genes or libraries of such genes, and for manipulating and characterizing genes and corresponding encoded polypeptides. The synthetic genes may be used for facilitating production of therapeutic or commercially important polyketide compounds. These may be used in human and veterinary medicine, pharmacology, agriculture and molecular biology. The present sequence is a synthetic gene used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 9510 BP; 1587 A; 2635 C; 3236 G; 2052 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New synthetic genes encoding polyketide synthases, useful for facilitating production of therapeutic polyketide compounds, or and veterinary medicine, pharmacology, agriculture and molecular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                     The invention relates to genes and proteins involved in the biosynthesis of macrolides by microorganisms. In particular it relates to the nucleic acids forming the biosynthetic locus for rosaramicin (a 16-member macrolide antibiotic) from Micromnospora carbonacea. The invention is useful for the biosynthesis of macrolides by microorganisms. It allows direct manipulation of macrolides and related chemical structures by chemical engineering of the proteins involved in the biosynthesis of rosaramicin. It is useful to catalyse certain biochemical reactions, in vitro or in vivo, to direct or enhance the synthesis or modification of spolyketide, polyketide substrate or its precursor. The present sequence is M. carbonacea polyketide synthase (PKS) type I gene. (Updated on 27-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated polypeptide involved in biosynthesis of macrolides by microorganisms, useful for biosynthesis of macrolides by microorganisms, preferably for biosynthesis of rosaramicin.

In particular it relates to the nucleic acids forming the biosynthetic locus for rosaramicin (a 16-member macrolide antibiotic) from Micromonospora carbonacea. The invention is useful for the biosynthesis of macrolides by microorganisms. It allows direct manipulation of macrolides and related chemical structures by chemical engineering of the proteins involved in the biosynthesis of rosaramicin. It is useful to catalyse certain biochemical reactions, in vitro or in vivo, to direct or enhance the synthesis or modification of spolyketide, polyketide substrate or its precursor. The present sequence is M. Carbonacea polyketide synthase (PKS) type I gene cluster. (Updated on 27-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated polypeptide involved in biosynthesis of macrolides by microorganisms, useful for biosynthesis of macrolides by microorganisms, preferably for biosynthesis of rosaramicin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention of macrolides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example

                                                                                                                                                                                                                                                                                           The present invention relates to novel Streptomyces aizunensis (NRI 11277) polyketide synthases and their coding sequences for polyene polyketide production. The polyketides are useful as fungal growth inhibitors and cancer cell growth inhibitors. The present sequence coding sequence for a polyketide synthase of the invention.
                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                        Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                            Isolated, purified or enriched nucleic acid useful for producing polyketides, encodes domains of the polyketide synthase system.
                                                                                                                                                                                                                                                                                                                                                                                                                                    P-PSDB;

CC encodes at least one domain of the polyketide synthase system formed by CC the polyketide synthases of AEB86865, AEB86867, AEB86871, AEB86873, AEB86873, AEB86877, AEB86877, AEB86873, AEB86874, AEB86874, AEB86876, CC an isolated, purified or enriched nucleic acid selected from the group CC consisting of AEB86866, AEB868676, AEB86874, AEB86876, CC AEB86878, AEB86880 and AEB86882; (2) an isolated, purified or enriched cc nucleic acid for the production of a polyhetide; (3) an CC expression vector comprising the novel nucleic acid or the nucleic acid cor the commid deposited under IDAC accession no. 250203-01, 250203-02, CC 250203-03, 250203-04, and 250203-05; and (6) an isolated polypeptide for the production of a polyketide. The nucleic acid can be used for production of a polyketide, for use as a fungal and cancer cell growth conhibitors. The present sequence encodes Streptomyces aizunensis polyene conhibitors. The present sequence encodes Streptomyces aizunensis polyene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
